

Give your home an imagination.

Three equal cubes. Warm metal. Art that unfolds with your family's stories and music. Tell your children about the world you grew up in. Let them add something of their own.

01 Experience the work

Experience ETHEREA's working technology turning speech and music into living art. Bring a childhood story or a favorite song. Explore the Chandelier prototype built for Burning Man and ETHEREA's permanent residential installation, then discover the home design and visual or spoken cues you can choose.

The living-art technology and original cube prototype are working foundations. Finished home hardware, cue detection, local AI, sensing and phone or computer access are in development.

02 Shape it around your home

We begin with your room: how you gather, the art you enjoy and the cues you would welcome. Together, we explore the sculpture's placement and finish, its supporting private supercomputer and any single-cube Lamps. The computer gives living art and local intelligence a place to run. We plan its location, power, cooling and network alongside the sculpture.

03 Agree on the commission

Your written proposal defines the sculpture, computer, software and included experiences; listening, memory and privacy controls; and the installation plan, delivery milestones, handover and support. We agree what will be delivered, any development required, acceptance criteria and service terms before work begins.
